AYA BOCHMAN - FULL STACK DEVELOPER (REMOTE)

SUMMARY

Passionate about crafting web applications from concept to completion, I emphasize strong UX/UI principles to bring ideas to life. Thanks to my end-to-end project experience, I've developed strong communication skills with various stakeholders. Continuously driven, I'm enthusiastic about exploring new technologies, innovating application designs, and pushing the boundaries of my expertise.

EXPERTISE

- React.js, Redux.js, Context API
- Next.js, SSR
- Node.js, MongoDB
- REST Architecture, API

EXPERIENCE

api.video, France/Remote — *Front End Engineer [React]*

Based in Bordeaux, France, api.video an API-first platform which enables developers to build, scale and operate on-demand and live video streaming in their own apps and platforms. The service handles the end-to-end workflow, from video ingestion to worldwide video delivery.

December 2021 - August 2023

- **Developing the Dashboard (React, TS, Context API, Node.js)** - In under a year, I stepped up as the lead front-end engineer for the dashboard project, the primary interface allowing customers to engage with the API, playing a pivotal role in key decisions spanning from front-end development and design to UX enhancements. I was intimately familiar with every line of code, which allowed me to take initiatives like refactoring, code reviewing, and deploying to production.

  - **Maintaining and growing Storybook** - as the dashboard project expanded, I managed our Storybook, crafting numerous reusable components, enhancing existing ones, and providing detailed documentation on their usage.

  - **Working with the API team (backend)** - I had the privilege of supporting our API team on the dashboard's backend, leveraging my prior knowledge in PHP.

  - **Presenting the dashboard** - thanks to my extensive understanding of the project, I was tasked with introducing the dashboard to new company members and guiding existing ones. I was given the trust and freedom to create my own presentation format.

- **Creating Demos, POCs and other tools** - as side projects to my main work, I had the opportunity to showcase the company's product through a Udemy demo and writing a blog article about it, as well

as creating a POC for the company's new website (transforming from Gatsby to Next.js), and developing an import tool.

Freelancer/Contractor, Remote — *Full Stack Developer*

Employed through my partner's established Serbian company Beoint DOO

July 2021 - December 2021

- **Developing Touchscreen Kiosk** - Developed a Web Applicaton for a big beverage company in Israel, which is now used as a desktop app on touch screens at every branch around the country. I was responsible for the UI part of the application, creating a pixel-perfect full flow from Login to Checkout page, using React and Redux Toolkit.

Matrix, Israel — *Full Stack Developer [React & Node.js]*

Working at Menora Mivtachim Insurance LTD

Menora Mivtachim LTD is one of Israel's five largest insurance & finance groups. The group specializes in asset management, manages the largest pension fund in Israel, is the largest General Insurer in Israel and the market leader in Motor Insurance sector.

September 2019 - July 2021

- **Developing new digital processes and web applications from scratch** – being involved in the planning and architectural process of new applications. Consulting and collaborating with product managers.

- **Working in an Agile environment** - delivering products and features, as well as adapting to quick changes within a short amount of time.

- **Working in a lead team** - we took ownership over the most important web developments, such as the login page, clients capital transfers, clients personal dashboard, clients update details, etc. Our team spearheaded the digitalization of legacy procedures and migrated them to much more efficient and streamlined online options.

- **Had gone through rigorous QA protocols** - as our products are used in production by roughly thousands of users every day.

- **Maintaining our apps in production** – using Kibana as our log dashboard, business logs and technical logs. Releasing quick fixes and changes to production by demand.

TECHNICAL SKILLS AQUIRED

FRONT END:

React.js,Redux.js, Next.js	HTML5, CSS3
Vanilla JS, ES6/7/8, Typescript, jQuery	Bootstrap 4, Material UI, Styled Components, TailwindCSS

BACK END:

Node.js, Express	MySQL
MongoDB, Mongoose	Elastic
Redis	Git

DESIGN:

Photoshop, Illustrator, Gimp, Krita, Adobe XD, Figma

EDUCATION

John Bryce College, Israel — *Full Stack Development*

2018-2019

MILITARY SERVICE

Military Intelligence, Israel — *Combat Medic*

2013-2015

Serving in "Sayeret Matkal" unit.
